

N/A presents:

Huntsville IMC Club Meeting

Topic: Un-electrified Flight

Question of the Month: In the KCVO ILS-17 (See attached image), the GS (Glideslope) intercept altitude is 2800 feet at ZIKDO. The "2800" with the lightning bolt is underlined. Then the "2500" at the FAF is underlined, but it is asterisked to LOC only. Are ALL the underlined altitudes hard minimums? Let's say you either manually or on autopilot start "sliding down" the GS and happen to cross the GS intercept fix 50 feet low. It is still well within GS specs -- probably within half a dot -- but slightly below the underlined altitude. Is it legal?

EAA/IMC Club, through the EAA's global Chapter structure, provides organized "hangar flying" focused on building instrument flying knowledge and skills. The program's network promotes a safety culture through continued education and believes that we develop safety and proficiency through education and real-life experience. Monthly meetings offer an opportunity to share in-flight experiences and valuable safety tips. Through the FAA Safety Program, aviation professionals provide informative WINGS presentations. You do not have to be an instrument-rated pilot to attend. Membership in the EAA/IMC Club is encouraged but not required to participate in this meeting. For more information
